

Driving sustainable aluminium

# Advancing aluminium recycling for electric cars

## Aluminium content in a car

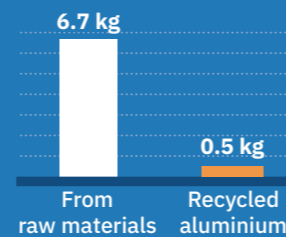

To make electric cars lighter they contain more aluminium.

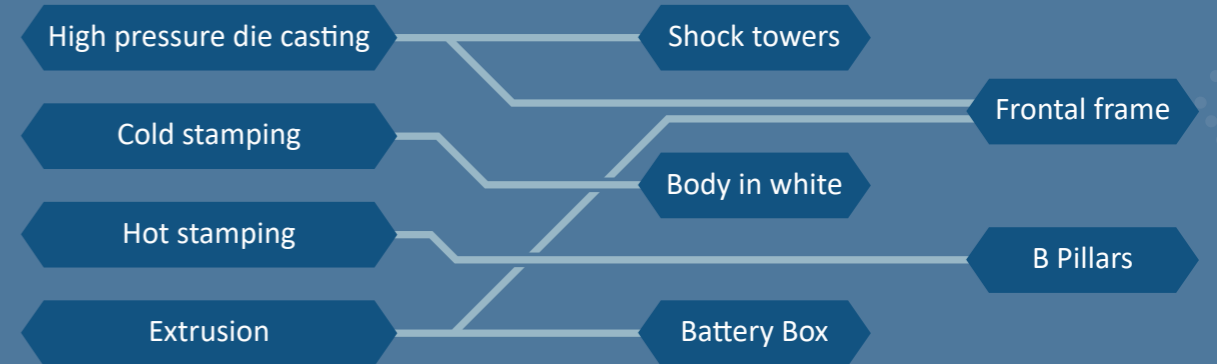

### 13 times cleaner !

CO<sub>2</sub> emissions per 1 kg of aluminium:

## 4 PILOTS

## 5 DEMONSTRATORS

SALEMA is developing brand new aluminium alloys with low critical raw materials, but high recycled aluminium content. Each will be tested at four pilots and used in five demonstrator car parts manufactured for electric vehicles.

The project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement N°101003785
